

IVS-Professional

IVS-Professional is the professional software for the Interactive Voting System (IVS[®]). It is used for those meetings where you need more than just basic results. IVS-Professional can be used with or without a chip card, so you can easily combine identified and anonymous questions.

With IVS-Professional you can show the results in clear charts, just like with IVS-Basic. But this software offers more! You can also choose the option to show the name of each participant. Determine the winner if you play a quiz. Or display the names of those participants that are still in the race.

IVS-Professional is extremely suitable for all types of meetings too. By showing the name of each participant that has voted, you know if all of them were present and cast a vote. On a second slide you can show the name of each participant along with whether they agree or disagree with a proposal.

On the right side of this sheet you can see a couple of user groups with a short description of the way they use the IVS-Professional software.

Obviously the IVS[®] can be used for a wide range of applications. If you want to know how you can use IVS[®] to support your communication, please contact us.

Quizzes

IVS-Professional can be used for all sorts of quizzes. If, after a series of questions, you would like to know who of the participants is best scoring at that time, you simply insert a slide showing the top ten, top three or whatever top you prefer. Another option is to show the names of the participants that are still in the race after each question. Giving one wrong answer means that you are excluded from the race! Should you need to know which participant has answered the fastest, IVS-Professional offers Time Vote. When you have a tie of two or more participants, you can still determine a winner by showing who was the fastest.

Strategic games

IVS-Professional can count the results of several questions and answers to show the preference of the audience. When combining with for example a framework you can determine exactly what the most important issues are.

Council meetings

Since you can show the names of each participant even during voting, you are always sure that every council member has cast a vote. IVS-Professional stores the results right after each question, so the information about each individual vote can be evaluated at any later moment.
